Software Production: fundamental research for the software society

Sjaak Brinkkemper Utrecht University

Software Engineering Netherlands 3 December 2014

Outline

Software products

- Software types
- Economic context
- Research framework
- Software production
 - Software product management,
 - Software ecosystems
 - Incremental method evolution
- Challenges for the research community
- Invitation and discussion

Societal context

ICT innovations create new products, services, companies, jobs, economic value, social value

International: Google SAP Oracle Microsoft Sage FaceBook SalesForce Netherlands: TomTom Planon GX Exact Unit4 Afas Mendix

. . .

[Faculty of Science Information and Computing Sciences]

What is a Software Product ?

A Software Product is defined as

a packaged configuration of software components, or a software-based service with auxiliary materials, which is released for and traded in a specific market (Xu & Brinkkemper, EJIS 2007)

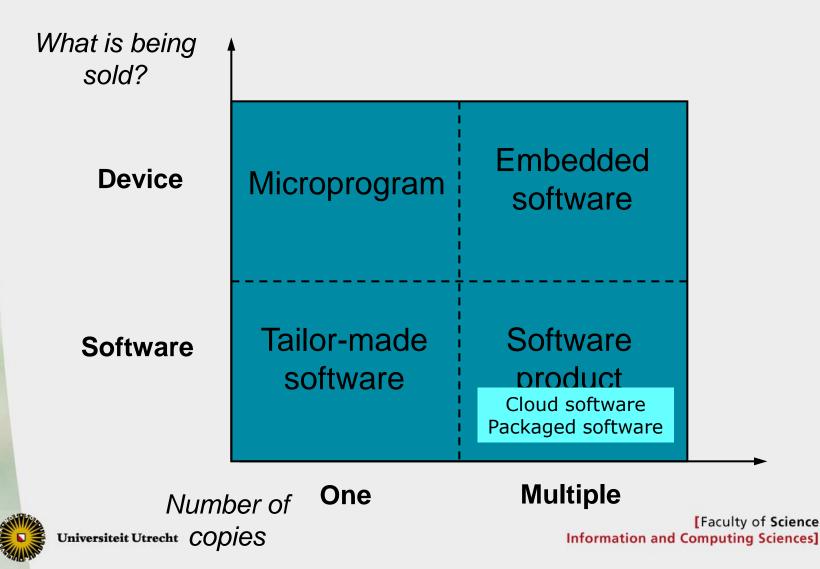

Examples:

ERP software Bookkeeping service Operating systems Desk-top publishing Computer-aided design Software development environments Customer-relationship mgmt

Essentially all software you are using in daily life and work [Faculty of Science Universiteit Utrecht Information and Computing Sciences]

What is a software product ?

Key differences

- 1. Market introduction requires precise *synchronization* of dependable software engineering activities
- 2. The same product requires *installation and usage* in different organizations, with different *hardware and software platforms*
- 3. The vendor company stays *owner* of the software and auxiliary materials, while the usage is *licensed* to the customers

Note: Cloud and mobile have huge impact on 2

Four main software types

- System infrastructure software
 Development tooling
 Enterprise applications
- 4. Games and consumer apps

Software types

1. System infrastructure software

- Foundation of software stack
- Security, systems management
- Not industry or function specific
- Many in open source

Segments

- Operating systems
- Network, storage, security
- Utilities, anti-virus, archiving

2. Tools

- Development, execution
- Allow for composition, reuse, optimization

Segments

- Portal and collaboration: user interface infrastructure
- Information management: data layer
- Modeling and development: for application logic
- Execution and Integration platforms: execution of appl. logic

Software types (2)

3. Enterprise Applications

- Used by information workers and end-users
- Bring some level of automation in business processes
- Most are industry or function specific
- Few in open source

Segments

- Office automation
- Horizontal business apps: finance&accounting, ERP, CRM
- Vertical business apps for industry specific solutions: billing, banking, travel reservations
- Technical applications: design and creation of physical products

4. Games and Consumer apps

- Consumer and professional games
- Strongest shift from packaged to cloud and mobile

Segments

- Offline: Home consoles, handheld consoles, computers
- Online: Cloud and mobile apps
- Consumer apps: editing of video and photo, hobbies

Economic context

OECD (2008): "The product software sector is among the most rapidly growing sectors in OECD countries, with strong increases in value added, employment and R&D investment."

EU

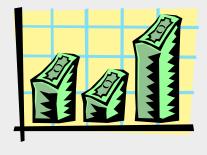

- 2.7 M employees
- Few good statistics

NL

- Dialogic research 2014
- 12.300 companies with 10,5 B euro revenue
- Export: 3.5 Beuro
- NL: 74.000 employees in NL-owned companies
- Total software: 2.8% GDP

Univers

Netherlands Export

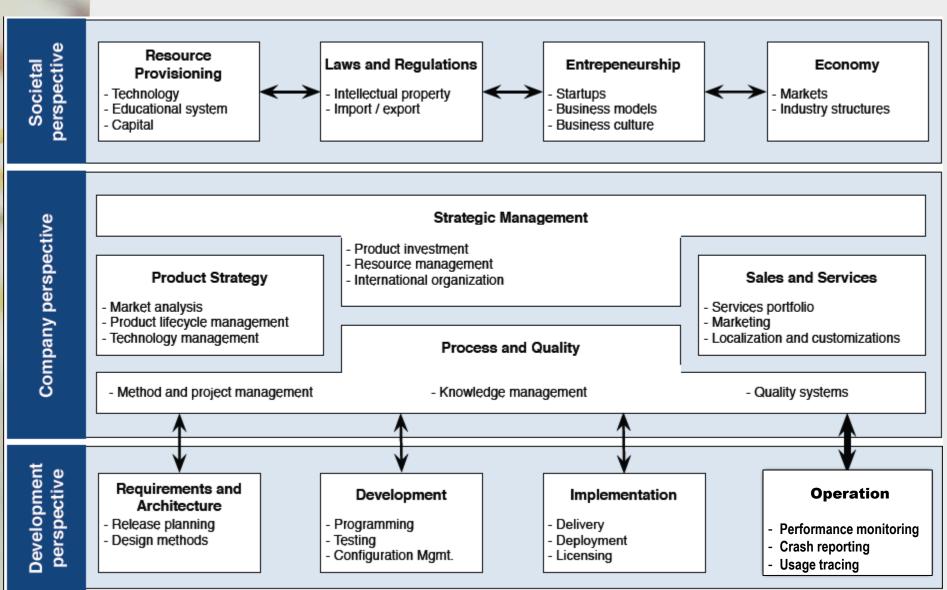

SoftwareVOC

Network of software industry in NL

- About ~300 companies
- Admin and meetings: Nederland ICT
- Board: AFAS, Unit4, Exact, VitalHealth, Hydrologic, AgroVision, Levi9, UUtrecht
- Annual conference SINC: run by CKC-seminars
- Industry invests heavily in Research and Development
 - ~25% of annual revenue (NL 2.5 Beuro ?)
 - Constant need for functional and technical innovation
 - Opportunity: Perform empirical and experimental research at industry premises
 - Industry is willing to pay for PhD research and match with cash
- Let's not waste taxpayers' money

Research Framework for Software Production

Research at Utrecht University

- Software Production
- Software Product Management
- Software Ecosystems and Delivery
- Software Architecting
- Game Production
- Knowledge networks

See www.cs.uu.nl

Universiteit Utrecht

[Faculty of Science Information and Computing Sciences]

Take home message

Scientific research in the field of software production is fundamental for creating innovative products and services, for new companies, jobs, economic and social value, but cooperation with the software industry is key to get well founded theories.

[Faculty of Science Information and Computing Sciences]

[Faculty of Science Information and Computing Sciences]

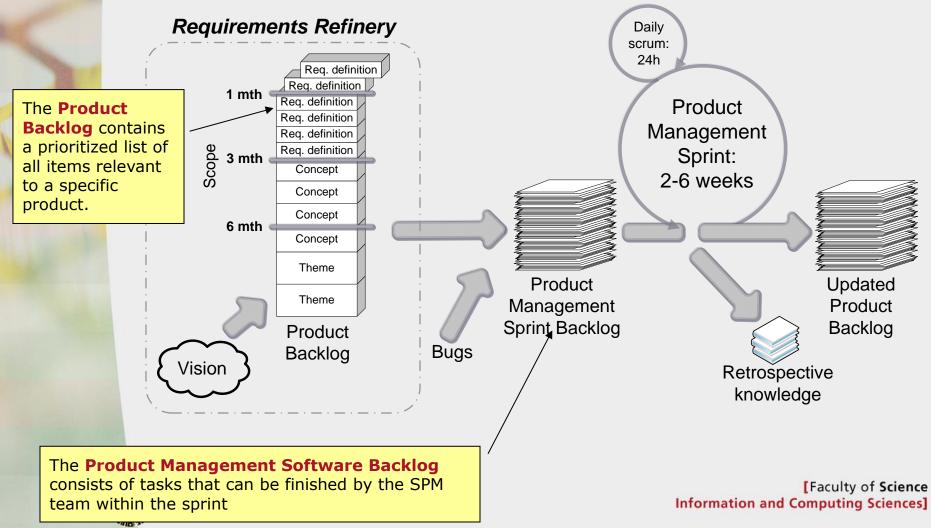

Bebensee et al., REFSQ 2010

Customer Involvement Factory

- Reports of questions, complaints or bugs
- Approximately 60.000 reports per year
- Handled by helpdesk and consultancy
- 85% can be solved by referring to the manual
- 15% is a bug or shortcoming

Scrum extension: Agile Requirements Refinery

Vlaanderen et al., IST 2011

Release planning with ILP

- Mathematical formalization using Integer Linear Programming
- Given are:
 - Lists of requirements
 - Revenue estimates
 - Resource cost estimates
 - Development teams and capacities

Managerial steering mechanisms

- Team transfers
- Deadline extension
- External resources
- Mandatory requirements

Universiteit Utrecht

[Faculty of Science Information and Computing Sciences]

Akker et al., REFSQ 2005; Li et al., REJ 2010

Development by one pool of developers

There are n requirements R_j . v_j = estimated revenue of R_j a_j = estimated resources need for R_j Q = number of developers in pool. T = development period d(T) = number of working days in planning period

$$x_{j} = \begin{cases} 1 \text{ if requirement } R_{j} \text{ is selected}; \\ 0 \text{ otherwise.} \end{cases}$$
$$\max \sum_{j=1}^{n} v_{j} x_{j} \text{ subject to}$$
$$\sum_{j=1}^{n} a_{j} x_{j} \leq d(T) Q,$$
$$x_{j} \in \{0, 1\},$$

for
$$j = 1, ..., n$$

Team development and transfers

 $\begin{aligned} a_{ij} &= \text{ estimated resource need for } R_j \\ \text{ from team i. There are m teams.} \\ Q_i &= \text{ number of developers in team i.} \end{aligned}$

area.

 U_{cap} = atomic transfer capacity unit y_{ik} = number of transfer capacity units from team i deployed in team k. α_{ki} = transfer effectiviness factor (from team k to team i).

$$\sum_{j=1}^{n} a_{ij}x_j \leq d(T)Q_i, \text{ for } i = 1, \dots, m.$$

$$\max \sum_{j=1}^{n} v_j x_j \text{ subject to}$$

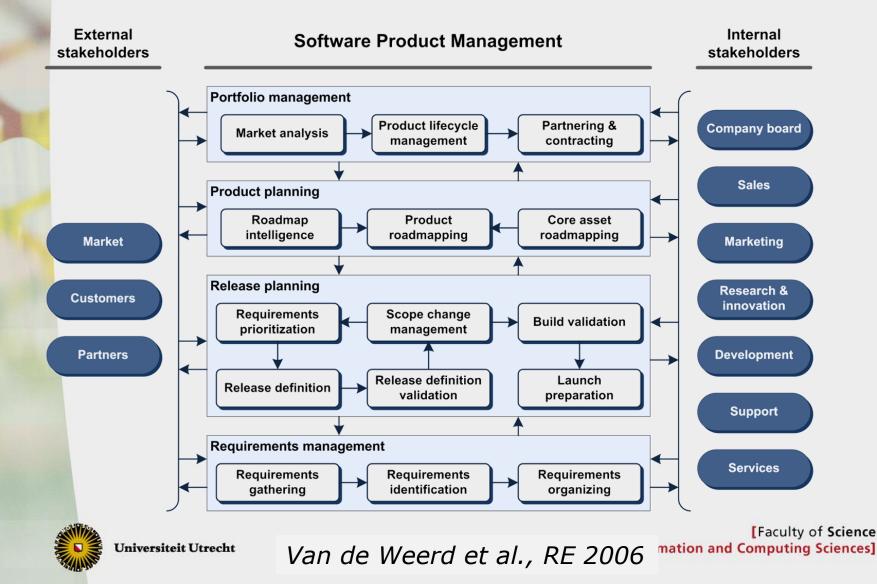

$$\sum_{j=1}^{n} a_{ij}x_j \leq U_{cap}[y_{ii} + \sum_{k:k \neq i} \alpha_{ki}y_{ki}] \text{ for } , i = 1, \dots, m,$$

$$\sum_{k=1}^{m} y_{ik} = m_i, \text{ for } i = 1, \dots, m,$$

$$x_j \in \{0, 1\}, \text{ for } j = 1, \dots, n,$$

$$y_{ik} \text{ nonnegative and integral, } \text{ for } j = 1, \dots, n.$$

Feedback in Software Supply Chains

Goøgle chrome

Google Chrome Terms of Service

These Terms of Service apply to the executable code version of Google Chrome. Source code for Google Chrome is available free of charge under open source software license agreements at http://code.google.com/chromium/terms.html.

1. Your relationship with Google

1.1 Your use of Google's products, software, services and web sites (referred to collectively as the "Services" in this document and excluding any services provided to you by Google under a separate written agreement) is subject to the terms of a legal agreement between you and Google. "Google" means Google Inc., whose principal place of business is at 1600 Amphitheatre Parkway, Mountain View, CA 94043, United States. This document explains how the agreement is made up,

Software Operation Knowledge

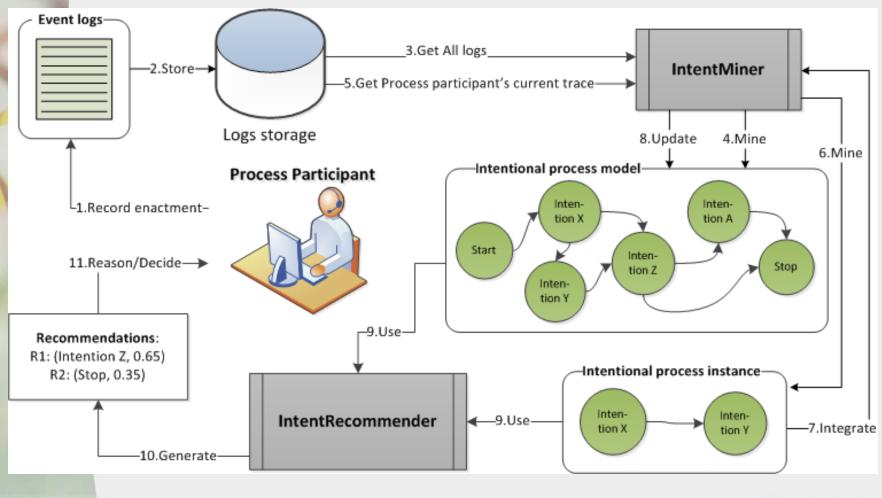

Definition: Software Operation Knowledge is knowledge of inthe-field performance, quality and usage of software, and knowledge of in-the-field enduser software experience feedback

Outline

Software products

- Software types
- Economic context
- Research framework
- Software production
 - Software product management,
 - Software ecosystems
 - Incremental method evolution
- Challenges for the research community
- Invitation and discussion

The software startup

Start with a simple process

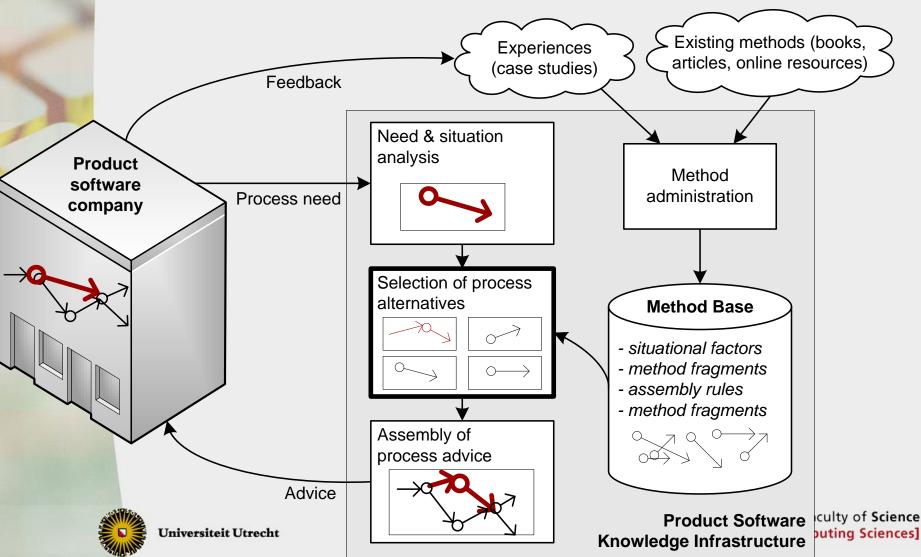

Universiteit Utrecht

Incremental Process Capability Product software company Gradual more extensive processen are added dependent on: product development culture internal maturity . external stakeholders

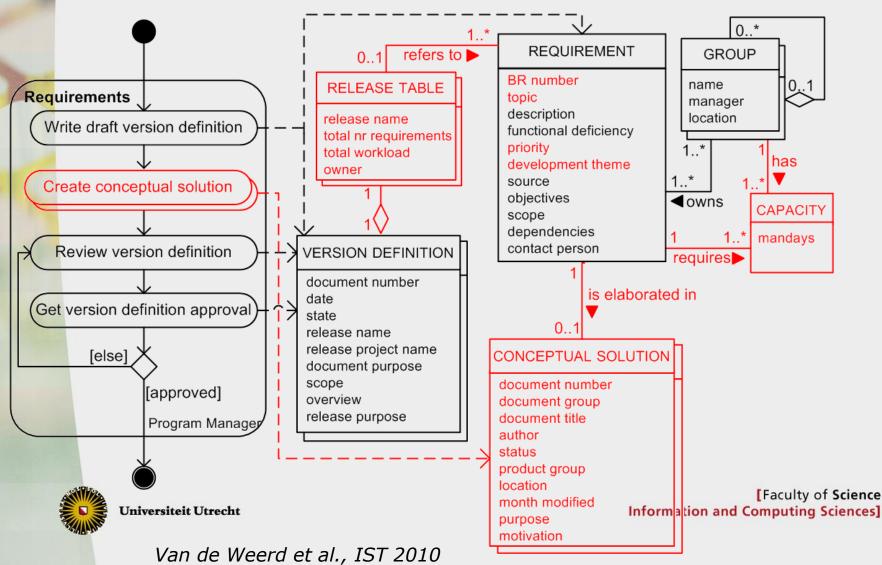

Universiteit Utrecht

On-line Method Engine

Van de Weerd et al., CAiSE 2007

Incremental Method Evolution

Formalization of Method Incrementation

Definition 3.1

The mapping method: $T \rightarrow M$, where m = method(t) means that the method $m \in M$ is the valid method at time t.

Definition 3.6

A method increment is a method fragment $f \in \mathbf{F}$ such that $\exists i \text{ contains}(f, \text{method}(t_i)) \land \neg \text{contains}(f, \text{method}(t_{i-1}))$

Definition 3.7 The mapping insert

 $F \times M \rightarrow M$: insert $(f,m_1) = m_2$ means that the method fragment fhas been inserted in the method m_1 resulting into method m_2

Rule 3.1 Insertion of concepts

insert $(c,m_i) = m_{i+1} \Rightarrow$ $\neg \text{concept}(c,m_i) \land \text{concept}(c,m_{i+1})$

Example

insert(RELEASE TABLE, BaanIncr2) =

BaanIncr3 \Rightarrow

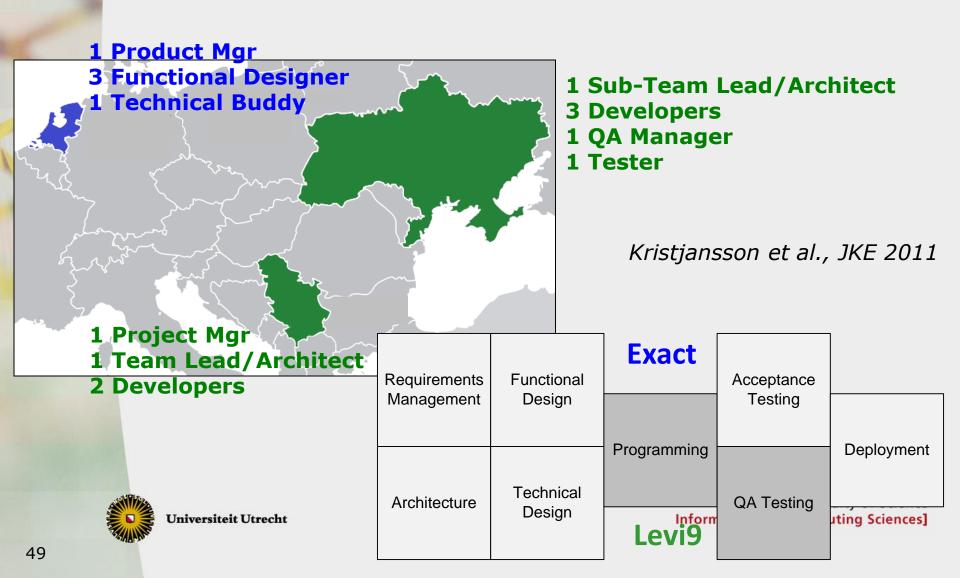

¬concept(RELEASE TABLE,BaanIncr2) ∧ concept(RELEASE TABLE,BaanIncr3)

The release table was not a concept in BaanIncr2 and therefore inserted to get BaanIncr3 [Faculty of Science

Outline

Software products

- Software types
- Economic context
- Research framework
- Software production
 - Software product management,
 - Software ecosystems
 - Incremental method evolution
- Challenges for the research community
- Invitation and discussion

Research differences

Software Engineering

- 1. One customer
- 2. Any domain
- 3. Different projects
- 4. Pool of workers
- 5. Changing collaboration patterns
- 6. Main players: project mgr, systems architect, requirements engineer

Software Production

- 1. One market
- 2. Same domain: domain experts
- 3. Release projects
- 4. Fixed organization
- 5. Fixed collaboration
- Main players: CTO, software architect, product manager

7. . . .

Universitei Great opportunities for experimental SE research !!

7. . . .

Research Challenges

- What are the fundamental theories of Software Production?
- How can optimal multi-tenant customizations be deployed in a secure manner?
- How can high volume requirements selection be performed in techno-economic alignment
- How can maturity growth in software production be supported by incremental method evolution
- Can we build fault tolerant components in the software supply chain, both from a technical as well as from an organizational perspective?
- What are the essential development tools for product development and deployment?

Universiteit Utrecht

Invitation and Discussion

SINC

Software Industry Conference, 12 March 2015 See <u>http://www.softwareindustryconference.com/</u>

Call: 4 slots with academic presentations

Questions?

- Papers see: www.dblp.org
- Email: <u>S.Brinkkemper@uu.nl</u>
- Contact me in case you are interested in joining a national or European project in Software Production
